

ANSI/ISEA 105-2024

NEW LOOK. SAME HIGH LEVEL OF PROTECTION.

SAFETY ICONS WITH EASIER-TO-IDENTIFY LEVELS OF PROTECTION

Look for a new safety icon combining ANSI/ISEA 105 Abrasion, Cut and Puncture resistance standards. It's a simple change designed to make it easier to identify the protection levels offered by your work gloves.

While no changes are being made in the current levels of protection, or the testing methods used, for the ANSI/ISEA 105 abrasion, cut and puncture resistance standards—the new pentagon-shaped icon will make it easier for end users to choose, and for distributors to supply, the right level of hand protection for any task.

NEW SAFETY ICON

ANSI/ISEA 105

OLD SAFETY ICONS

Eliminating the multiple icons showing the levels of abrasion, cut and puncture resistance, the new icon combines all three levels of protection. It will also clearly display whether the gloves being used offer one, two, or all three classifications of protection offered, as can be seen in the following examples.

ANSI/ISEA 105

All
Classifications

ANSI/ISEA 105

Cut Resistance
Only

ANSI/ISEA 105

Abrasion Resistance
Only

ANSI/ISEA 105

Abrasion and Puncture
Resistance
